Important Note

The information shown in these documents is for guidance only. No liability is accepted for any errors or omissions. The designer or user is solely responsible for the safe and proper application of the parts, assemblies or equipment described.

Industrial types

Solid shaft

NUMBER OF PULSES

- Miniature industry standard encoder for high numbers of pulses
- High reliability
- Application e.g.:
 - CNC axles
 - Machine tools
 - Robots
 - Special purpose machines
 - High-speed winding machines

5 / 10 / 20 / 25 / 28 / 32 / 50 / 60 / 72 / 100 / 128 / 144 / 200 / 250 / 256 / 288 / 300 / 360 / 400 / 500 / 512 / 600 / 720 / 900 / 1000 / 1024 / 1250 / 1500 / 2000 / 2048 / 2500 / 3000 / 3600
 Other number of pulses on request

TECHNICAL DATA mechanical

Shaft diameter	6 mm / 6.35 mm
Absolute max. shaft load	radial 10 N, axial 5 N
Absolute max. speed	max. 10 000 min ⁻¹
Torque	≤ 0.3 Ncm
Moment of inertia	approx. 2.8 gcm ²
Protection class (EN 60529)	Housing IP64, bearings IP64
Operating temperature	-10 ... +70 °C
Storage temperature	-25 ... +85 °C
Vibration resistance	100 m/s ² (10 ... 2000 Hz)
Shock resistance	1 000 m/s ² (6 ms)
Connection	1.5 m cable ¹ or connector, axial or radial
Housing	Aluminium
Flange	S = synchro flange, R = pilot flange
Weight	approx. 80 g

¹ Other cable length on request

TECHNICAL DATA electrical

General design	as per DIN VDE 0160, protection class III, contamination level 2, overvoltage class II	
Supply voltage (SELV)	with RS 422 (R, T):	DC 5 V ± 10 %
	with push-pull (K, I):	DC 10 - 30 V ²
Max. current w/o load	40 mA (DC 5 V), 60 mA (DC 10 V), 30 mA (DC 24 V)	
Standard output versions ³	RS 422 (R):	A, B, N, \overline{A} , \overline{B} , \overline{N} , \overline{Alarm}
	RS 422 (T):	A, B, N, \overline{A} , \overline{B} , \overline{N} , Sense
	push-pull (K):	A, B, N, \overline{Alarm}
	push-pull complementary (I):	A, B, N, \overline{A} , \overline{B} , \overline{N} , \overline{Alarm}

² Pole protection

³ Output description and technical data see chapter "Technical basics"

PIN ASSIGNMENT

Introduction

These installation instructions are provided for the connection and starting procedure of your shaft encoders. You can get further informations from our Shaft Encoders Catalogue.

Safety and Operating Instructions

- The incremental shaft encoders of the type RI 36 / RI 41 model series are quality products manufactured in accordance with established electrical engineering standards. The units have been delivered from the factory in perfect conformance to safety regulations.
- To maintain this condition and to ensure trouble-free operation, please observe the technical specifications of this document.
- Installation and mounting may only be performed by an electrotechnical expert!**
- The units may only be operated within the limits specified by the technical data.
- Maximum operating voltages must not be exceeded!**
The units are designed complying with VDE 0160, protection class III. To prevent dangerous structure-borne currents, the equipment has to be run on safety extra-low voltage (SELV) and must be in an area of equipotential bonding.
- Application: Industrial processes and control systems.
Overvoltage at the connecting terminals must be limited to the values within overvoltage category II.
- Please avoid shocks to the housing – especially to the encoder shaft – and axial or radial overload to the encoder shaft.
- Maximum accuracy and durability of our shaft encoders is only granted when using suitable couplings.
- The high-quality EMC-specifications are only valid together with standard-type cables and plugs. When using screened cables, the screen must broadly be connected with ground on both ends. Likewise, the voltage-supply cables should entirely be screened. If this is not possible you will have to take appropriate filtering measures.
- Installation environment and wiring are influential on the encoder's EMC: Thus the installer must secure EMC of the whole facility (device).
- Transient peaks on the power supply leads are to be limited by the preconnected power unit to a maximum of 1000 V.
- In electrostatically threatened areas please take care for neat ESD-protection of plug and connecting cable during installation work.
- Specified maximum shaft loads are only given under restrictions:
 - Full bearing life of 1×10^{10} revolutions (typ.) will be reached at 35% of full rated shaft load
 - a bearing life of 1×10^8 revolutions (typ.) will be reached at 100% of full rated shaft load.
- For use in class II circuits only

Connection diagram

* Special types are additionally marked by an ordering code -S. In this case customer specifications are to be applied. If you don't know these please call us for the specifications, indicating the encoder ordering code.

Mechanical data

Mounting	synchro flange ¹⁾ , round flange ¹⁾
Shaft diameter	RI 36: 6 mm/6.35 mm; RI 41: 6 mm
Absolute max. shaft load	radial 30 N (6.5 lbs), axial 15 N (3.3 lbs)
Max. speed	10,000 RPM
Torque	≤ 0.3 Ncm
Protection class housing/ball bearing	RI 36: IP 64/64 ²⁾ ; RI 41: IP 50/40
Operating temperature	-10 ... +70 °C
Storage temperature	-25 ... +85 °C
Vibration performance (IEC 68-2-6)	100 m/s ² (10 ... 2,000 Hz)
Shock resistance (IEC 68-2-27)	1,000 m/s ² (6 ms)
Connection	cable or flange box axial/radial
Housing	aluminium
Weight	RI 36: 80 g; RI 41: 60 g

¹⁾ use threads M3 for fastening

²⁾ no standing water allowed at the shaft entrance or at the ball bearing

Electrical data

General design	as per DIN VDE 0160, protection class III, contamination level 2, overvoltage class II				
Screening	connected to housing (RI 36 only)				
Power consumption	40 mA (5 V DC), 30 mA (24 V DC), 60 mA (10 V DC)				
Supply voltage U_B	5 V DC (SELV) ±10%		10 ... 30 V DC (SELV)		
Output circuit ¹⁾	PP	PP	RS422	PP	PP compl.
